## Projects

*Sociagram:*  | 

Full-Stack web app inspired by the popular app Instagram (Desktop)

- Stored attachments and uploaded materials utilizing Paperclip gem and Amazon Web Services for new posts and user avatar images
- Integrated React.js for building user interface and kept track of states for each post or any new or deleted comments

*League Watcher:*  | 

League of Legends Stat App using Node, Webpack, and React.js.

- Styled with bootstrap allowing users easy navigation to check stats of champs, items, and spells
- Showed visual stats of champions using D3 and information received from 3rd Party APIs

*Profile Creator:*  | 

Django Project with Python and Bootstrap utilizing MongoDB

- Setup a profile page in which users can change their email, password, and bio.
- Utilized MongoDB for migration-free changes to the database

---
